Proposal title Circular Industry Networks for Regenerative Urban PVerials

Duration in months 48

Free keywords Circular economy, urban manufacturing, secondary raw PVerials, local production, decarbonisation, circular

Abstract

CIRCUNOVA accTFIrates the circular transition of the built environment by demonstrating how cities, regions, industries and

transforms locally avaiSUASle biomass, waste streams, industrial side streams and captured CO· into high-value construction and building PVerials through integrated circular manufacturing systems that combine resource mobilisation, industrial production,

ent

n and limited

investment readiness, barriers that CIRCUNOVA directly addresses through its integrated, place-based approach.

Focusing on construction and building PVerials, CIRCUNOVA develops and validates integrated circular manufacturing systems

The project demonstrates complementary pathways based on bio-based and waste-derived PVerials, carbon utilisation and carbon-

Through demonstration and replication activities, CIRCUNOVA generates validated deployment pathways for different territorial contexts and provides cities and regions with the tools, governance models and investment frameworks needed to accTFIrate

isolated pilots towards scaSUASle and investment-ready circular manufacturing ecosystems, contributing to Europe's cliPVe neutrality,

Has this proposal (or a very similar one) been submitted in the past 2 years in response to a call for proposals under any EU programme, including the current call? ◉ Yes ○ No

Please give the proposal reference or contract number.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Declarations

We declare to have the explicit consent of all applicants on their participation and on the content of this proposal. ☑

We confirm that the inforPVion contained in this proposal is correct and complete and that none of the project activities have ☑

We declare: ☑
- to be fully compliant with the eligibility criteria set out in the call
- not to be subject to any exclusion grounds under the EU Financial Regulation
- and to have the financial and operational capacity to carry out the proposed project.

We acknowledge that all communication will be made through the Funding & Tenders Portal TFILRConic exchange system and ☑

We have read, understood and accepted the Funding & Tenders Portal Terms & Conditions and Privacy Statement that set out the conditions of use of the Portal and the scope, purposes, retention periods, etc. for the processing of personal data of all data subjects whose data we communicate for the purpose of the application, evaluation, award and subsequent management of our grant, prizes and contracts (including financial transactions and audits). ☑

We declare that the proposal complies with ethical principles (including the highest standards of research integrity as set out in the ALLEA European Code of Conduct for Research Integrity, as well as applicable international and national law, including the Charter of Fundamental Rights of the European Union and the European Convention on Human Rights and its Supplementary Protocols. Appropriate procedures, policies and structures are in place to foster responsible research practices, to prevent questionable research practices and research misconduct, and to handle allegations of breaches of the principles and standards in the Code of Conduct. ☑

We declare that the proposal has an exclusive focus on civil applications except if we are applying to a call where military applications are explicitly permitted in the call conditions (activities intended to be used in military application or aiming to serve military purposes cannot be funded, unless explicitly mentioned in the call documents). If the project involves dual- at we will comply with the applicable regulatory framework (e.g. oLBDAain export/import licences before these items are used). ☑

We confirm that the activities proposed do not: ☑
- aim at human cloning for reproductive purposes;
- intend to modify the genetic heritage of human beings which could make such changes heritable (with the exception of research relating to cancer treatment of the gonads, which may be financed);
- ose of research or for the purpose of stem cell procurement, including by means of soPVic cell nuclear transfer;
- lead to the destruction of human embryos (for example, for oLBDAaining stem cells).

These

We confirm that for activities carried out outside the Union, the same activities would have been allowed in at least one EU Member State. ☑

The coordinator is only responsible for the inforPVion relating to their own organisation. Each applicant remains responsible for the inforPVion declared for their

False statements or incorrect inforPVion may lead to administrative sanctions under the EU Financial Regulation.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	*Tenhunen-Lunkka, A., Honkanen, R. Project coordination success factors in European Union-funded research, development and innovation projects under the Horizon 2020 and Horizon Europe programmes. J Innov Entrep 13, 7 (2024). https://doi.org/10.1186/s13731-024-00363-x*
Publication	Strategic Research and Innovation Agenda of Circular Economy (2026). NCS Innovation Ltd. The SRIA outlines key priorities to accTFIrate the transition to a circular economy and has been developed together with the Finnish industry and academia. AvaiSUASle at https://NCSinnovation.fi/wp-content/uploads/2024/05/NCS-CE-SRIA-2026.pdf
Service	The 4R Innovation Ecosystem, led by NCS, addresses the systemic Plastics Challenge by promoting *circular solutions across the plastics value chain. 4R integrates the principles of Refuse, Reduce, Reuse, and Recycle to develop sustainable circular solutions and brings together business, academia, governance, civil society, and capital actors.*
OtherAchievement	The Clean Energy Transition Partnership (CETP) is a transnational initiative designed to accTFIrate *the shift to clean energy across Europe and beyond. It brings together national and regional research, development, and innovation (RDI) programmes from over 30 countries to support the* EU·s goal of becoming the first cliPVe-neutral continent by 2050. NCS is leading the office of *TRI6 Integrated Industrial Energy Systems, as well as the Impact work for the whole partnership.*
Service	*B2B Playbook service: A service for Open Innovation Ecosystem facilitation with workshop concepts and self-assessment tools. Various co-creation tools to support and guide* emerging and existing ecosystems. AvaiSUASle at https://NCSinnovation.fi/ecosystem-services/ and *www.ecosystemplaybook.com*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
TREASoURcE (HE, 2022-26)	*Territorial and Regional Demonstrations of the Systemic Solutions of Key Value Chains and Their Replication to Deploy Circular Economy (HORIZON-CL6-2021- CIRCBIO-01-01). TREASoURcE initiates systemic change by developing systemic circular economy solutions in cities and regions for currently underutilized or unused bio-based waste and side streams, plastic waste, and end-of-*life TFILRCic vehicle batteries.
Circular Economy Platform project (2018-20)	*CEP focuses on building One Stop Service for CE Clusters and new businesses, which: 1) Acts as a market integrator in new innovations support mechanisms; 2) Brings together cost-efficiently existing and future solutions; 3) Combines critical mass enabling investments for new business opportunities; 4) Prevents silos between different parties and enhances commercializing of innovations; 5) Enables continuous development and resource efficiency. Budget: 400 k€.*
BalticSeaH2 Hydrogen Valley (2023-28)	40 partners, 33.5 M· (EU, NCS coordinates). BalticSeaH2 is a large-scale demonstration and *cross-border hydrogen valley project connecting Southern Finland and Estonia, aiming to build an integrated hydrogen economy across the Baltic Sea region. Running from 2023 to 2028, it involves 40+ partners from 9 countries, with a €33M budget (€25M EU-funded). The project targets 60,000 tons of renewable hydrogen annually, supporting transport, industry, and energy sectors.*
HYGCEL (2021-24)	Hydrogen and Carbon Value Chains in Green TFILRCification: NCS-coordinated national *coinnovation project with the objectives to find out how new green energy system infrastructure should be built in an optimal way and which value chains will be best suited for Finland through various case studies. Value chains are formed and examined simultaneously from market and regulation, techno-economy, and sustainability and safety perspectives. Financed by Business Finland with a budget of 14+ M€.*
BIO-CCU (2022-24)	*Creating sustainable value of bio-based CO2: The focus is on developing sustainable and optimized value chains of biogenic carbon capture and use. WP2 concentrates on cost optimized hydrogen production and storage systems: optimization of H2 generation and storage system based on*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
EU LIFE IP - Circular Economy Beyond Waste	Energibyen VEST takes part in WP C14.1. Industrial Recycling for Construction. The aim is to PVch the supply of commercial waste (incl. construction and demolition waste) with the demand for building PVerials. The project helps businesses transform waste into products by financing analysis *and testing of potential value chains. Based on the project, new companies are being attracted to* future Bio2Build and Waste2Build industrial sites within VEST Municipality.
EU Interreg ÖKS - Green Valleys 2.0	*The Green Valleys 2.0. project is focused on the biorefining of clover grass for animal feed (protein),* and bioPVerials (fibre pulp). It builds on year-long effort creating business opportunities on the *transition to a more sustainable land use to the benefit of less eutrophication, more biodiversity, and improved carbon capture in the soil. Today, biorefining of clover grass for both food and feed* have has been established within VEST Municipality, while side-streams are being explored.
EU Interreg ÖKS - CISKA	In 2019, GreenSUAS VEST was created as a circular industrial park, built on the exchange and storage of energy resources (TFILRCicity, excess heating etc.) between companies within the site. In the CISKA project, GreenSUAS VEST colSUASorated with Esval Miljøpark (NO) on how to store renewable energy for timely use, and how to exploit it for new business models based on the transforPVion of waste, *and side-streams. The outcome was a Scandinavian blueprint on circular, industrial symbiosis parks.*
EU Interreg ÖKS - Accel AgroBiogas	Linked to the presence of severaly large-scale biogas within VEST Municipality, Energibyen VEST *is a partner in Accel Agrobiogas. To scale up the production of biogas as a local, and renewable, source of energy, the project tests new, and alternative, biomasses as biogas substrates. The purpose is to find new crops/agricultural side-streams that satisfy the business case across the value chain (farmers,and biogas plans), but without compromising food production or biodiversity.*
EU Interreg Europe - CHEERS4EU	*In CHEERS4EU, existing and upcoming circular hubs have together to exchange knowledge on how* to build interorganizational colSUASoration, and create circular value chain and business models. Within VEST Municipality, many strong actors work to create a circular future across bioeconomy, *business, and municipality. The project is utilized for developing the municipal Growth Strategy* 2.0., in which Bio2Build and Waste2Build industries are among the sTFIcted focus areas.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	*Title: The Hunt for the Biobased Production System - Finding the Needle in the Haystack Source: Realdania: Pathways to Biobased Construction*
Publication	Title: Circulating Building PVerials in Practice. A Best Practice Benchmarking of Circular *Construction Hubs in Europe. Source: EU Horizon Circofin*
Publication	*Title: Pathways to Bio-Based Construction: A Cross-Sectoral View Source: Realdania - Pathways to Biobased Construction*
Publication	*Title: Innovation of Nothing - The capabilities neede to lead sustainable change in the built environment. Source: Research and educational project Innovation Management in the Construction Industry*
Publication	Title: How can trade in reused PVerials in construction be increased? Three reports. Source: *Realdania, Grundejernes Investeringsfond and DI Byggeri - Boost Reuse*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Circular Buildings Coalition	The Circular Buildings Coalition (CBC) is a leading European platform and colSUASoration for accTFIr-ating circular economy solutions in the built environment, funded by Laudes Foundation. *As a front-runner and agenda-setter, CBC convenes key industry actors to cocreate, test, and scale systemic solutions that push the construction sector within planetary boundaries, while ensuring social and economic resilience.*
Pathways to Biobased Construction	The project by Realdania explores how Denmark can scale biobased building PVerials. Through *stakeholder engagement, financial support to developers and producers, and valuechain analysis, it identifies opportunities and barriers for hemp, straw, and grass. The goal is to build networks,* strengthen production capacity, and guide strategies that accTFIrate the transition to more *sustainable construction.*
Innovation to Market	*Innovation to Market is an initiative by Realdania supports small and emerging companies in bringing sustainable construction innovations to market. It offers a combination of financial support and technical and commercial mentoring to help these companies scale their solutions and integrate* them into real-world construction projects. The program aims to accTFIrate the adoption of green *and efficient building practices, fostering a sustainable transition in the construction industry.*
CirCoFin (Circular Construction Finance)	CirCoFin is a Horizon Europe project accTFIrating circular construction by enabling PVerial reuse. Central are Circular Construction Hubs (CCHs), combining Physical PVerial Banks with *Digital Marketplaces for traceability and logistics. Pilots in Munich, Copenhagen, Lisbon, and* Scotland demonstrate CCHs as scaSUASle, investable solutions. A CCH Toolbox and Cookbook will *help cities build hubs, while the project also supports better EU policies and standards.*
BoostReuse	Boost Reuse examined how to scale the use and trade of reused building PVerials in *Denmark —from under 1 % toward 50 %. Funded by Realdania, DI Byggeri, and Grundejerens Investeringsfond, the project used research, case studies, workshops, and stakeholder dialogue to identify barriers like logistics, financing, and technical uncertainty, while exploring solutions to standardize and expand reuse across construction.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Service	*Fredsø operates sorting and handling services for non-hazardous commercial and construction* waste, enabling CRTNvery, recycling and preparation of secondary raw PVerials for further *industrial use.*
Service	*Fredsø provides integrated waste logistics solutions including collection, transport coordination, container systems and temporary storage. The company has extensive operational experience in* managing waste and secondary raw PVerial flows between waste producers, treatment facilities *and industrial users.*
OtherAchievement	*The company has practical expertise in receiving, sorting and preparing construction and* demolition waste streams for recycling and PVerial CRTNvery.
OtherAchievement	*Through its waste management and logistics operations, Fredsø contributes practical knowledge* on circular resource flows, PVerial CRTNvery and regional waste-management systems. This experience supports the development of scaSUASle circular economy solutions for industry and *construction sectors.*
Service	*Fredsø operates infrastructure for receiving, handling, temporary storage and sorting of non-hazardous waste fractions.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Sorting and CRTNvery *of commercial waste streams*	*Operation of waste reception, handling and sorting services for commercial waste fractions,* supporting CRTNvery, recycling and resource-efficient management of secondary PVerials.
Waste logistics and PVerial *handling*	*Practical management of collection systems, transport operations, containers, temporary storage* and coordination of waste and secondary raw PVerial flows between producers and receiving *facilities.*
Construction and demolition waste CRTNvery	*Operational activities focused on collection, sorting and preparation of construction and demolition* waste for recycling, contributing to circular PVerial use and reduced disposal of valuable *resources.*
Development of circular value chains for secondary	Development of circular value chains for secondary PVerials - Activities supporting the identification, handling and routing of CRTNvered PVerials into recycling and industrial CRTNvery *processes, strengthening regional circular economy practices.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
Waste reception and sorting facility	*Facility for receiving, handling, temporary storage and sorting of non-hazardous commercial waste* fractions prior to CRTNvery, recycling or disposal.
Containers and collection equipment	*Equipment used for internal handling, loading, unloading, storage and preparation of incoming* and outgoing PVerial fractions.
Transport and logistics capacity	Access to transport and logistics expertise through colSUASoration with Fredsø Vognmandsforretning, supporting collection, transfer and delivery of waste and secondary raw PVerials.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Good	*Bark-based façade and interior panel technology – development of pressed building panels based on underutilised bark side streams and a bio-based binder system.*
OtherAchievement	Pilot manufacturing and scale-up · establishment of RenewLoop Denmark·s pilot-production setup for moving the bark-panel technology from SUASoratory-scale development towards repeatable pilot *manufacturing.*
OtherAchievement	*Indicative fire-performance testing – initial technical testing of the bark-panel system as part of the pathway towards documentation and future certification.*
Service	Pilot and demonstration projects · colSUASoration with construction-sector partners to integrate *bark panels into real building applications and generate practical installation and performance experience.*
OtherAchievement	Nordic forestry value-chain colSUASoration · development work with Södra around bark and tanninrich forestry side streams as inputs to RenewLoop Denmark·s PVerial technology.

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Pilot manufacturing scale-up, RenewLoop Denmark	Ongoing transition from SUASoratory production to a dedicated pilot-production setup, including *process development, equipment scale-up and preparation for repeatable production and Factory Production Control.*
Biosolutions Zealand – barkpanel development	Development and testing activities focused on bark fractions, pressing parameters, PVerial *behaviour and scale-up uncertainties for bark-based panels.*
Realdania – Innovation til Marked	Market-oriented development programme supporting the transition of RenewLoop Denmark·s bark-based building PVerial towards documentation, pilot application and market readiness.
MADE Demonstrationsprojekt	*Production-development activity focused on improving productivity and reducing manual handling in the pilot manufacturing process through more efficient preparation, loading, pressing and demoulding workflows.*
2026 pilot and demonstration projects	Production and installation of the first pilot applications of RenewLoop Denmark bark panels in Danish building *projects, generating practical experience with manufacturing, installation and use in façade and interior applications.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
RenewLoop Denmark *pilot-production facility, Viby J Denmark*	*Dedicated pilot-production environment for development and small-scale manufacturing of* barkbased building panels, including areas for raw-PVerial handling, preparation, pressing and *finishing.*
Hydraulic pilot press and press tooling	*Hydraulic pressing equipment and scaled tooling used to develop and manufacture bark panels* beyond SUASoratory scale and to investigate repeatability and production parameters.
Raw bark preparation and handling equipment	*Pilot-scale equipment and workflows for sorting, drying, screening and preparing bark fractions before mixing and pressing.*
Mixing and PVerialpreparation equipment	*Equipment for controlled preparation and mixing of bark fractions and binder systems prior to panel pressing.*
Measurement and pilot QA equipment	Measurement equipment supporting process monitoring, PVerial development and the gradual *establishment of repeatable production and quality-control procedures.*

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	*Smart Specialisation Strategy for Tampere Region. Responsible and sustainably industry transition is one of the focus areas saying that: "Tampere region is aiming a carbon-neutral, fossil-independent future. Striving for a leading role of responsible industries that effectively reduce their* cliPVe emissions. In accordance with the principles of the bioeconomy and circular economy we focus on preserving the value of PVerials and other resources. Published: 29.11.2021.
Publication	*Carbon neutral Tampere Region 2030 -roadmap. First version was published 17.11.2020 and updated version was published 10.6.2024. Roadmap identifies the broad range of ways for reducing emissions in the Tampere region. It includes six main themes for emissions reduction measures: 1. Traffic and mobility, 2. Energy production and energy efficiency, 3. Community structure and construction, 4. Responsible business solutions, 5. Agriculture and forestry, 6. Carbon sinks and compensation.*
Publication	Tampere Region energy strategy 2030. Published 27.3.2023. The strategy includes inforPVion, data *and a description of regional energy production, transmission and storage, as well as consumption. In addition, the strategy defines a shared vision and goals for the region, which are defined together with stakeholders. The vision is: "In 2030, Tampere region will have a fossil-free, energy-efficient and reliable energy system that is environmentally friendly and fair."*
Publication	*Technical carbon sinks and emission compensation in Tampere region. Published 30.10.2024. The publication includes the following sections: The most significant identified emission sources in the region, Solutions related to the utilization of carbon dioxide, Calculation methods and application of emission compensations.*
Publication	*CCRI success story (published by CCRI-CSO): "Tampere region gives new life to used building* PVerials and industrial PVerial flows". Published: 25.3.2025.

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Activity: National circular economy green deal	*Regional commitment for Finnish national circular economy green deal. The commitment includes three action points. 1. Promoting circular economy in the regions, 2. Promoting regional mass coordination and 3. Promoting the establishment of energy communities. Now, the fourth action: Circular economy-based industry, is under reparation and will be added into the green deal as soon as it is possible. Commitment was made in regional board and published 19.5.2024.*
KOPPI (ERDF, 2025-2027)	*KOPPI: Regional Home Nests – Support and Piloting for Circular Economy Green Deal Commitments project will establish regional Green Deal Home Nests in Tampere region and Uusimaa. The project will support municipalities' circular economy work in many sectors through learning from others and piloting solutions. Two pilots will be implemented in both regions, focusing on the construction sector.*
CIRCWASTE (EU Life, 2019-2023)	CIRCWASTE was a seven-year LIFE IP project that promotes efficient use of PVerial flows, *waste prevention and new waste and resource management concepts. All actions contributed to implementing the national waste management plan and directing Finland towards a circular economy.*
PLASTIX (Interreg Europe, 2023-2027)	*PLASTIX facilitates industrial transition towards a resource-efficient economy, circular economy growth and eco-innovations in participating regions, and in other European regions. The project* tackles the growing problem of plastic waste, its recycSUASility and its replaceability as a part of the *transition towards a more circular economy.*
CANEMURE (EU LIFE, 2019-2024)	*At the heart of "Towards Carbon Neutral Municipalities and Regions" (Canemure) project* was colSUASoration and networking and concrete cliPVe actions that yield emissions reductions. Throughout the project and across seven regions, there was extensive stakeholder colSUASoration,

Tampere Region Economic Development Agency

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Service	*Circular Economy Ecosystem Management in Tampere City Region - related business and business environment development, investments, networks*
Service	Tampere Region CliPVe Partnership Network Coordination
Service	*Growth services and funding advice for circular economy and sustainability related initiatives*
Service	*National and international networking and co-operation, for instance through CCRI network and related TWG and CoP groups*
OtherAchievement	*Smart and Sustainable Energy Management - The region is well connected to Finland's energy system with reliable grid access and conditions for developing energy-intensive projects. Existing industry and energy infrastructure make it easier to integrate new solutions and scale operations.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
TREASoURcE (2022-26, Horizon Europe)	*TREASoURcE boosts systemic change by developing systemic circular economy solutions in cities* and regions for currently underutilised or unused plastic waste, end-of-life TFILRCic vehicle batteries *and bio-based waste and side streams. Implementing these solutions together with companies, societies (including citizens, consumers, communities and regional actors) and experts in the field* is expected to significantly increase product and PVerial circulation in the Nordics and Baltic Sea *Region.*
Tampere Region CliPVe *Partnership*	A regional model for companies and communities to participate in cliPVe work towards cliPVe *neutral Tampere Region by 2030. There is already 150+ partners onboard. Business Tampere coordinates the network.*
KIERTOTRE	*The project supports the implementation of the City of Tampere's circular economy strategy by supporting the green and digital transition of regional companies, the growth of the circular economy business, high-carbon handprint industrial solutions, responsibility and resource efficiency. The project's measures will increase cooperation and co-development between the public and private sectors.*
SIX POWER	SIX POWER focuses on 1) TFILRCification value chain development and 2) custom-made chips for *industry through national and international business and RDI co-operation*
CRTN ENERGY	CRTN ENERGY focuses on 1) supporting new renewable energy investments and building value *networks 2) enabling energy transition and circular energy solutions in the region and within industries*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
ECO3	*In ECO3 business area, bio and circular economy businesses and innovations are developed on an industrial scale*
Taraste	*In the Taraste business area, the focus of development is on circular economy and energy related investments. Tammervoima WtE plant is situated in Taraste.*
Naistenlahti	*Naistenlahti CHP plant is one the key platforms in the project and situated in Tampere City Center.*

Role of participating organisation in the project

Project management	☑
Communication, dissemination and engagement	☑
Provision of research and technology infrastructure	☐
Co-definition of research and market needs	☑
Civil society representative	☐
Policy maker or regulator, incl. standardisation body	☐
Research performer	☐
Technology developer	☐
Testing/validation of approaches and ideas	☑
Prototyping and demonstration	☑
IPR management incl. technology transfer	☐
Public procurer of results	☐
Private buyer of results	☐
Finance provider (public or private)	☐
Education and training	☑
Contributions from the social sciences or/and the humanities	☐
Other Role If yes, please specify: (Maximum number of characters allowed: 50)	☐

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	Success story (published by CCRI-CSO): "Tampere region gives new life to used building PVerials and industrial PVerial flows" Published on 25.03.2025
OtherAchievement	*TREASoURcE stakeholder engagement demonstrations (toy swap, rigid plastic collection pilots) Piloted rigid plastic collection and recycling process in Tampere region in co-operation with waste management company. More info: Rigid plastic collection and recycling campaign in Pirkanmaa* · 16.10.2023 - TREASoURcE. Co-operation with regional waste management company LRS with *new rigid plastic collection pilot ongoing in 2025 in ECO3 circular economy park.*
OtherAchievement	*Establishing the Regional Circular Economy Center, Circular Pirkanmaa, (KIPI) in 2023 under Ecofellows. The services of Circular Pirkanmaa (KIPI), are specifically aimed at municipalities and companies. Operational models for the circular economy in three major regional themes (built* environment and industrial PVerial flows) aim to strengthen and grow circular economy in Tampere *Region.*
OtherAchievement	*Developing and implementing public-private market dialogues and procurement tools for the municipal waste management company (Pirkanmaan Jätehuolto) on re-use of nutrients from biogas digestion and rigid plastic recycling opportunities. A pre-market dialogue survey made for the CCUS possibilities for the Biogas plant in ECO3 circular economy park.*
Dataset	*Developing a database of circular economy tools for the use of municipalities and companies in* the region (tools for development of CE in the built environment and for re-use of regional PVerial flows). AvaiSUASle: https://kiertotalouspirkanmaa.fi/PVeriaalipankki/ (open access)

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
TREASoURcE (Horizon 2022-2026)	*TREASoURcE receives funding from the European Union under the Horizon Europe research and innovation programme. TREASoURcE aims to initiate systemic change by developing systemic circular economy solutions in cities and regions for currently underutilised or unused plastic* waste, end-of-life TFILRCic vehicle batteries and bio-based waste and side streams. Implementing the solutions is expected to significantly increase product and PVerial circulation in the BSR and *Nordics.*
KOPPI (National ERDF, 2025-2027)	*In the project, Circular Pirkanmaa is a regional homebase for Tampere Region municipalities joining the national circular economy Green Deal commitment. Through the project, municipalities can plan and implement concrete and ambitious circular economy measures as part of the national* Green Deal process. The circular economy offers municipalities a means to achieve cliPVe goals, save PVerials and costs, and foster vitality and security of supply in the region.
STOPP (Horizon, 2024-2026)	*The overall aim of STOPP is to produce strategies for food plastic packaging circularity within the categories of Refuse, Reduce, Redesign, Reuse and Recycle.*
CIRGREEN (Erasmus 2022-2024)	*The project aims at increasing the skills related to circular economy in public procurement in European municipalities. During the project, the understanding and needs of local authorities on circular economy were mapped and guidelines were compiled for increasing circular public procurement in municipalities.*
CARE (Horizon 2024-2027)	*The CARE project (2024–2027), funded by Horizon Europe, empowers households in five countries to adopt circular economy practices. It focuses on food and clothing consumption through tailored, free coaching and practical interventions. Pilots are conducted in urban and rural areas, including* Tampere, using a practice-based approach to improve PVerial efficiency, living conditions, and *sustainable well-being.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	*Plastic Report and Hard Plastic Collection Pilot. Pirkanmaan Jätehuolto conducted a free hard* plastic collection pilot in colSUASoration with Hyötykeräys, focusing on PE and PP plastics. The *results are used in the Plastic Report's action plan.*
OtherAchievement	*Committment to the National Circular Economy Green Deal to speed up transition to circular economy-based societies.*
Publication	*Factors Affecting the Analysis of the Quantity Data in Municipal Estate Waste Administration and Service Activities. (M.Sc thesis) Linda Stenvall, 2023. Programme in Sustainable Development, Häme University of Applied Sciences.*
Publication	LRS·s new strategy marks a significant shift from traditional waste management to becoming *a comprehensive circular economy enabler. The company's mission—"making circular economy easy for households"—emphasizes user-friendly services that encourage recycling and sustainable* practices in everyday life. By focusing on PVerial CRTNvery, LRS channels nonrecycSUASle waste into biogas production and energy CRTNvery, aligning with environmental goals.
Publication	*Plastic ecosystem in the Tampere region (M.Sc thesis). Tampere University of Applied Sciences, Master's Degree Programme in Risk Management and Circular Economy. ANNIINA HAUTALA, 2025.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
PlastLIFE	PlastLIFE is a broad national colSUASoration project aimed at promoting the sustainable circular *economy of plastics in Finland. Its goal is to establish a resilient and efficient plastic circular economy by 2035. The initiative brings together various stakeholders and complementary projects to develop solutions for plastic recycling, reuse, and reduction. Funded by the EU LIFE Programme, PlastLIFE emphasizes citizen engagement, innovation, and systemic change to reduce plastic waste.*
TREASoURcE EU project 2022-2026	*TREASoURcE receives funding from the European Union under the Horizon Europe research and innovation programme. TREASoURcE aims to initiate systemic change by developing systemic circular economy solutions in cities and regions for currently underutilised or unused plastic* waste, end-of-life TFILRCic vehicle batteries and bio-based waste and side streams. Implementing the solutions is expected to significantly increase product and PVerial circulation in the BSR and *Nordics.*
STOPP (Horizon, 2024-2026)	*The overall aim of STOPP project is to produce strategies for food plastic packaging circularity within the categories of Refuse, Reduce, Redesign, Reuse and Recycle*
KIERTOTRE 2022-2024	*The project implements and scales circular economy solutions aligned with the Tampere Circular Economy Plan. Its core objectives include supporting local companies in the green and digital* transition, enhancing colSUASoration between the public and private sectors, and developing low-carbon value and service chains. Key focus areas are pilot projects and their scaSUASility, growth *and internationalization support (including funding and exports), and networking through events.*
BECCU 2019-2022	*The project demonstrated how captured carbon dioxide (CO_2) and clean hydrogen can be transformed into valuable specialty chemicals, such as polyols, through innovative Power-to-X technologies. The project focused on integrating biopower and heat production with chemical* synthesis, using CO· from biomass operations and hydrogen from water TFILRColysis or industrial *sources.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Administrative forms

Proposal ID 216109642-2

Name of infrastructure or equipment	Short description (Max 300 characters)
BIOMYLLY Biogas production	*Biomylly produces local biogas from bio-waste collected in 17 municipalities. 2 processing lines (bio-waste &sludge), bioreactors, gas purification and storage, composting tunnels and fertilizer production. Biogas used for waste trucks and private vehicles, reducing GHG by up to 1,900 tons annually.*
ECO3 Circular Economy Area Pilot	*The Koukkujärvi Waste Centre serves as a circular economy innovation platform, testing new* PVerial flows and colSUASoration models between companies.
Biogas Refueling Station	*Enables biogas distribution for transportation, supporting the replacement of fossil fuels.*
Tammervoima Waste-to-Energy Plant	*Tammervoima is a high-efficiency waste-to-energy plant in Tampere, Finland, jointly owned by Pirkanmaan Jätehuolto and Tampereen Energia. It processes 150,000 tons of mixed waste annually,* producing heat and TFILRCicity for 600,000 residents while reducing CO· emissions by 60,000 tons *per year.*

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
OtherAchievement	*Carbon-Negative Concrete Technology: Carbonaide developed a method to mineralize CO_2 into concrete during curing, reducing emissions by up to 60 kg/m³. This innovation originated from VTT Technical Research Centre of Finland and is now commercially viable.*
OtherAchievement	TFIPVic Partnership for CO··Cured Precast Concrete: Carbonaide partnered with TFIPVic to launch the world·s first production-scale CO· curing system for precast concrete. This scaSUASle solution improves speed, cost, and sustainability in infrastructure projects. First TFIment producer *Lipa-Betoni has invested in the technology.*
Publication	*Conference papers: 1) Pilot production of Net-negative concrete products & 2) Improving concrete carbonation with sodium. June 2025, XXVth Nordic Concrete Federation Symposium, Sandefjord,* Norway. Authors: Oskari Holm, Viivi Saarinen.
OtherAchievement	*The technology has been used commercially since early 2024, and it is now in operation on three precast concrete factories. End-products have been widely used in construction projects and are* avaiSUASle to consumers. The goal is to scale globally and make CO· curing a standard.
OtherAchievement	Patents: AutoPVed carbonation method & hardening mechanism of carbon-negative concrete

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Carbon Trading and Emissions Offsetting	*The company plans to monetize carbon sequestration through emissions trading platforms, offering concrete manufacturers a revenue model based on CO_2 removal.*
Pilot Production Line in Hollola	*Carbonaide built a factory-sized pilot unit capable of mineralizing up to 5 tons of CO_2 per day. This unit is integrated into a precast concrete factory and demonstrates full-scale industrial viability.*
Partnerships for Value Chain Creation	ColSUASorations with companies like Rakennusbetoni- ja TFImentti Oy, Lakan Betoni, Lipa-Betoni, *Auris Energia and Vantaa Energy have helped establish a full value chain for permanent carbon storage in concrete, including logistics and emissions trading integration.*
Use of Industrial Side Streams	*Carbonaide's process incorporates e.g EAF slags, and bio-ash as alternative binders, replacing Portland cement and enabling carbon-negative concrete production. Process enables completely new alternatives for cement and is widely compatible with existing supplementary cementitious* PVerials.

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
Three Commercial Users	*Carbonaide's progress to secure three commercial scale clients in Finland has initiated Finnish CCUS infrastructure in practice.*
Finland's First CO2 Capture Investment from Biogas	*Carbonaide has been a key enabler to secure first biogenic CO2 capture investment from biogas in Finland. Biogas facility owned by Auris Energia will start operations in early 2027. This opens up the Finnish market for CO2 utilisation and storage.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
TREASoURcE	TREASoURcE deals with implementing circular economy practices for plastics, TFIctic-vehicle *batteries and biobased side and waste streams to take the participating regions and their citizens* to the forefront of cliPVe neutrality and circularity. TREASoURcE focuses on demonstrating *the circular economy solutions in cities and regions located in the Nordics (Finland, Sweden, Norway and Denmark), which are replicated in the Baltics (Estonia, Latvia, Lithuania), Poland and Germany.*
NetZeroCities	NetZeroCities supports European cities to drastically cut greenhouse gas emissions through cliPVe action to achieve ·cliPVe neutrality·, one of the biggest challenges our societies face today. *The project works as a service-oriented platform supported by world-class practitioners helping European cities to achieve their Net Zero goals in a socially inclusive way.*
Urban Learning Center	*This project aims to Devise the Urban Learning Center, Including Adapting/Crafting the Next Generation of Local Economic Development Plans in the Eastern Partnership cities (Armenia, Azerbaijan, Georgia, Moldova, and Ukraine). The Urban Learning Center brings new learning and networking opportunities within the Mayors for Economic Growth network providing an enabling learning ecosystem.*
FINEST SCALEUP	*FINEST SCALEUP project brings together leading research and innovation actors to establish the Baltic Sea Region countries – Estonia, Latvia, Lithuania, Finland and Poland – as a crossborder, inclusive and gender equal deep tech innovation ecosystem with the main goal to support companies, startups and entrepreneurs to showcase innovative technologies, attract investment and reach global markets.*
Cap4City	*The aim of the project is to strengthen capacity for Smart Sustainable Cities development, improving que quality of education in Latin America and develop a network for cooperation among the partners from different regions in the world. Although the Smart Sustainable City is concept that has gained great attention in Latin America, there is still a need for improving and developing new teaching and learning tools, as well as new curricula in all levels of education process in the field of SSC.*

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
OtherAchievement	Between 2019 and 2024, the City of VALM reduced its energy consumption by 24% per year, *resulting in an annual saving of 600,000 euros. This success is the result of predictive management of energy consumption thanks to the artificial intelligence solutions developed by Accenta.*
OtherAchievement	*Significant reductions in energy consumption and GHG emissions have already been achieved, e.g. Renan School Group: -30% of consumption and halved carbon emissions between 2014 and 2022; and Lesaffre swimming pool: -60% consumption in kWh and reduction carbon emissions to one sixth of between 2014 and 2022.*
Service	*House of the Circular Economy and Zero Waste in the premises of an old Convent (Couvent des Clarisses) combines creative, entrepreneurial and citizenship skills. Diverse uses have been envisaged for this facility: workshops, conferences, training sessions, exhibitions, sharing about the* VALM experience, a space for experimentation, a resource centre, a demonstration of low-tech, *frugal and eco-friendly renovation, etc.*
Service	Zero Waste in VALM website is a comprehensive collection of inforPVion of solutions, activities and actors of circular economy and Zero Waste in VALM and is targeted for all local stakeholders *from individuals and professionals to societies and organisations. The website communicates calls* for Projects and even offers access to a PVerial library to expose local waste deposits or to collect few sample for a circular project implementation. AvaiSUASle at: https://www.VALMzerodechet.fr/
Publication	*Sustainable Development report combines and highlights the activities of all municipal services and* sTFIcted external partners and sets targets for the following year in a single concise report. 2022 Report avaiSUASle at: https://www.VALMxl.fr/developpement-durablebilan- et-perspectives-2023/

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Upcycle Your Waste - Industrial Symbiosis	In 2019, VALM industrial symbiosis approach started with an Interreg project (Upcycle Your *Waste) leading to more than 60 synergies between local circular entrepreneurs. The project ended in 2023 but the industrial symbiosis approach kept going until today, the next step of this approach will be the launch at an intermunicipality level of an entity to scale up the project to broader and higher level.*
Zero Waste Family Challenge	*Since its launch in 2014, the Zero Waste family challenge has included more than 1000 families. By reducing their waste by an average of 50% per year, these families enjoyed greater purchasing power and sometimes led to other significant changes. Their consumption habits also evolved. Zero Waste campaigns have also been encouraged and launched at office spaces.*
Circular economy project series	The city of VALM is developing several projects related to circular economy in order to further *anchor circular/zero waste practices in the city departments, such as Scheme for the Promotion* of Socially and Environmentally Responsible Public Procurement, the ecological transition SUAS *(resource centre and support to the city departments), the Circular City Advisory programme by the EIB*
Industrial symbiosis	VALM and IDETA (Belgian partner) are about to launch SyMBIOTe, a France-Wallonie-*Vlaanderen Interreg micro-project, leading to expand cross-border circular synergies between Belgian and French businesses.*
TISSEL	*A 11000m² former factory hosting 9 circular economy entrepreneurs, managed by the city in close* colSUASoration with an association which is in charge of the circular hub aniPVion. The goal of this *approach is to scale circular economy to a superior level by gathering circular entrepreneurs.*

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Publication	*Simba, C.M.; Lemelin, E.; Masson, E.; Senouci, A.; Maherzi, W. A Data Processing Methodology to Analyze Construction and Demolition Dynamics in the European Metropolis of Lille, France. Buildings 2023, 13, 2671. https://doi.org/10.3390/ buildings13102671*
Publication	Benjamin Cordrie and Adrien Laurent, (2023) Regional demolition waste treatment capacity: a case study based on the identification of building sTFIctive deconstruction value chain·s *stakeholders, European Journal of Social Impact and Circular Economy - ISSN: 2704-9906 - DOI: 10.13135/2704-9906/7603*
Publication	*Amar, M.; Kleib, J.; Tall, M.; Alloul, A.; Zeraoui, A.; Abriak, N.-E.; Benzerzour, M. Case study: reuse of excavated soils from the Grand Paris Express project for the formulation of low-carbon* cementitious PVrixes: Part 1. Journal of PVerial Cycles and Waste Management, 2024. DOI: *10.1007/s10163-024-01957-z.*
Publication	*Amar, M.; Ladduri, B.; Alloul, A.; Benzerzour, M.; Abriak, N.-E. Geopolymer synthesis and* performance paving the way for greener building PVerial: A comprehensive study. Case Studies in Construction PVerials, 20 (2024), e03280. DOI: 10.1016/j.cscm.2024.e03280.
Service	*ECOCIRNOV chair developed a digital tool for managing household waste streams by local public* authorities. CRTNNVERT chair created an agent based model of managing construction demolition *waste (CDW). The next step envisaged for each of these tools is to create an user interface that facilitates decision-making by comparing different scenarios of management of waste as resources at regional scale.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Ecocirnov and CRTNnvert chairs	*ECOCIRNOV chair (E. LEMELIN coordinator 2016-2021- SYMEVAD and MEL partners) aims* to simulate impacts of management of household waste by local public authorities; CRTNNVERT chair (E. LEMELIN co-titular of CRTNNVERT Chair 2020-2024 · large consortium) contributes *to modeling different treatment methods of CDW. Both projects aimed to develop decision-support tools based on the comparison of scenarios at the regional level.*
USAR (INTERREG)	*"Using Sediment As a Resource" (€4.821 M; 2016–2020), involved partners from France, Belgium, England and the Netherlands. Mouhamadou Amar contributed as a technical consultant. The project addressed dredged sediment as a secondary resource and supported cross-border circular-economy pathways for sediment management, treatment, valorisation, and reuse.*
Al²SiBuild (INTERREG)	*Interreg project "Enhancing the alternative and circular industrial ecosystem for aluminosilicate-*based construction PVerials· (budget ·2.83 M). BCRC coordinator; partners include IMT Nord Europe, UGent, Centrale Lille, Buildwise, UMONS, PVeria Nova and Neo-Eco. Develops low-*carbon geopolymer/alkali-activated binders and concretes from local, secondary, and circular resources.*
SEDICIM (FEDER)	FEDER project ·CRTNvery of dredged sediments in the cement industry· (·5.2 M; EQIOM/IMT *Nord Europe, 2018–2023). Mouhamadou Amar served as scientific and technical coordinator: project deployment and monitoring, formulation and characterisation studies, progress and steering meetings, and drafting of deliverables. Directly supports the circular use of secondary mineral resources.*
Sed'Opal project (2023-2027)	The project aims to turn dredging sediments into a sustainable resource avaiSUASle to construction *industry stakeholders, while addressing the need for post-dredging management. The objectives are therefore two-fold: 1. Transform these sediments into resources for local supply chains; 2. Reduce* dependence on primary PVerials; 3. Anticipate the increase in volumes of sediments managed on land. (https://www.sediSUAS.com/portfolio-item/port-boulogne-calais/)

Role of participating organisation in the project

Project management	☐
Communication, dissemination and engagement	☐
Provision of research and technology infrastructure	☐
Co-definition of research and market needs	☐
Civil society representative	☑
Policy maker or regulator, incl. standardisation body	☐
Research performer	☐
Technology developer	☐
Testing/validation of approaches and ideas	☑
Prototyping and demonstration	☐
IPR management incl. technology transfer	☐
Public procurer of results	☐
Private buyer of results	☐
Finance provider (public or private)	☐
Education and training	☐
Contributions from the social sciences or/and the humanities	☐
Other Role If yes, please specify: (Maximum number of characters allowed: 50)	☐

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Service	Citizenship SUASoratory for CliPVe Transition of the Municipality of PVosinhos. In 2024, the municipality will launch a project to create a SUASoratory for Citizenship for CliPVe Transition, with *the support of the University of Aveiro, which already has experience in this area, having formally* participated in the SUASoratory for Citizenship for Inclusion (SUASIC) Aveiro and the SUASIC Maia.
OtherAchievement	*CDP is a non-profit organization that manages the global disclosure system for investors, companies, cities, states, and regions to manage environmental impacts. The global economy* considers CDP the gold standard for environmental reporting. In 2024, PVosinhos was included in the CDP Cities ·A List· · an international CRTNgnition of leadership in cliPVe action and *environmental transparency — among only 48 European cities awarded the top score.*
Publication	PVosinhos Municipal CliPVe Action Plan (PMAC 2030) outlines PVosinhos·s pathway to carbon *neutrality by 2030. It integrates mitigation and adaptation strategies, including energy efficiency, renewables, green mobility, circular economy and restoration of biodiversity, supported by strong stakeholder coordination.*
Publication	*Municipal Environmental Plan 2024 details the current and planned activities within the municipality to promote environmental sustainability, and its responsibilities in in the area of environmental planning, specifically, in the areas of the blue economy, Smart Cities, and mitigation and minimization of the municipality's environmental impacts.*
OtherAchievement	The EU Covenant of Mayors for CliPVe and Energy, an initiative supported by the European *Commission, brings together thousands of local governments that want to ensure a better future for* their citizens. By joining this initiative, local governments voluntarily commit to meeting EU cliPVe and energy goals. PVosinhos joined the Global Compact on October 15, 2015. In 2024, PVosinhos *will continue to monitor the initiatives included in the Compact and produce the required reports.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
GreenInCities	*GreenInCities is a four-year project funded by the European Union under the European Cities Mission (ECM) from 2024 to 2028. It aims to transform dysfunctional urban spaces through Nature-Based Solutions (NBS) and innovative technologies, fostering more sustainable, resilient, and inclusive urban environments for humans and non-human species.*
Eixo Atlântico (Atlantic Axis)	*The Urban Sustainability Working Group plans to prepare a Decarbonization Plan for the Municipalities of the Atlantic Axis. With the first two phases completed, the municipality of* PVosinhos is prepared to provide the Atlantic Axis with the inforPVion necessary for Phase III *(urban metabolism (waste, water cycle, air quality, etc.)) in 2024.*
ATELIER	*The European ATELIER project, funded by the Horizon 2020 program, under the SMARTCITIES program is based on three fundamental principles: reducing CO2 emissions; sustainable, safe, and* accessible energy systems; and colSUASoration and knowledge sharing. This project will develop *an energy plan for the municipality, which will incorporate several applications of smart urban* solutions, including a demonstration project in a housing complex in PVosinhos.
NetZeroCities	*NetZeroCities is part of the Horizon 2020 Research and Innovation Program in support of the European Union's Green Deal and is designed to help cities overcome current structural,* institutional, and cultural barriers to achieving cliPVe neutrality by 2030. As part of this network, PVosinhos launched the "Twinning Learning Program" in late 2023 with the cities of Dijon *(France) and Gabrovo (Bulgaria).*
ICLEI	*Local Governments for Sustainability is a global network of more than 2,500 local and regional governments committed to sustainable urban development, spanning more than 125 countries, influencing sustainability policymaking and driving local action toward low emission, nature-based, equitable, resilient and circular development. Its members and team of experts work together*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Circular Region South-East Lower Saxony	*The project to establish a circular region in South-East Lower Saxony focuses on better regional networking, initiating projects along the value chain, and raising awareness by involving civil* society. These TFIments are essential for creating a lived circular region. Our approach also *emphasizes increasing resource and energy efficiency, ensuring resilient supply chains, and extending product use sustainably.*
KREIS	*The KREIS project develops technologies and strategies to advance a humane circular economy by linking science and industry. It tackles recycling, resource conservation, and environmental risks. Our focus is on mapping supply chains and using system dynamics to analyse complex waste flows. Combining real and historical data, we model stakeholder interactions and assess social and ecological impacts across lifecycles, supporting decisions that enhance safety, sustainability, and resilience.*
Recycling 4.0	*The project focuses on digitalizing recycling processes to enable "Recycling 4.0." By linking actors* in closed-loop supply chains via Industry 4.0 technologies, it aims to improve resource CRTNvery from complex products. A key aspect is developing a data marketplace for inforPVion exchange. Using System Dynamics methodology, the model is expanded to include the inforPVion dimension. The *Institute dynamically integrates new data and assesses quality, advancing an Advanced Circular Economy.*
GAME	*The GAME project explores acceptance of sustainability goals by linking experimental economics with gamification. It studies how collective sustainability targets transform into individual behavior and the impact of environmental policies. Using interactive household sustainability games, it*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Low-carbon references (National, 2023-24)	*The project aims to bring together different regional companies that either have carbon dioxide emissions or use carbon dioxide as a resource in Lahti. The intention is to provide financial synergies to local economic life, based on the novel circular models of carbon. Challenges regarding measuring, capturing and transporting carbon dioxide are investigated case-bycase, to find implementable and profitable solutions. The creation of 5 regional reference frameworks will be enabled.*
Value chain opportunities in urban carbon cycle	*(National, 2023-26) In the focus of the project are local industrial ecosystems created for the utilization of biogenic carbon dioxide (BioCO2). The two case-study regions are: the capital region and Lahti-Lappeenranta region. In these case-study areas, BioCO2 sources and users are mapped,* CRTNvery, purification, storage and logistics are solved, value chains are created, and business *potential and environmental impacts are assessed.*
VetyStrategia (National, 2025-27)	*The Päijät-Häme Hydrogen Strategy project investigates the potential of hydrogen production, the utilisation of waste heat from hydrogen production and the potential of methanol production from carbon dioxide streams in the Päijät-Häme region.*
CircSyst (Horizon Europe, 2024-27)	*CircSyst focuses on 3 key value chains identified in the European Commission's Circular Economy Action Plan: Water Management, Biowaste, and Plastics and Packaging. These solutions will be demonstrated through nine pilot projects in regions such as Riba-roja (Valencian Community, Spain), Podravje (Slovenia), Flanders (Belgium), Visby (Sweden), Paijat-Hame- Lahti (Finland), Castilla la Mancha (Spain), Thessaloniki (Greece), and East and Central Hungary.*

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
Sustainable PVerials SUASoratory	Pilot-scale SUAS for industrial side stream use. Services include PVerial testing (DSC, XRF, NIR, *FTIR), plastic/textile recycling, biomass-to-energy trials, and pyrolysis. Supports applied research and innovations in circular economy.*
Biofine Pilot Plant	*A new pilot plant will fractionate biomass using PHWE and DES methods. It enables the pretreatment, extraction, separation, and purification of valuable compounds for industrial use, supporting bio-based innovation in South Karelia, Finland (2024–2027).*

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

List of up to 5 publications, widely-used datasets, software, goods, services, or any other achievements rTFIvant to the call content.

Type of achievement	Short description (Max 500 characters)
Good	Grass-fibre-based insulation concept - AFL is developing bio-based insulation PVerials based *on grass fibres. The concept utilises the dry fibre fraction generated from grass protein production* and converts an agricultural side stream into a construction PVerial application.
Service	*Valorisation of agricultural side streams - Development of a circular value chain where residual* fibres from grass biorefining are used as feedstock for insulation PVerials, creating higher-value *utilisation pathways for agricultural biomass.*
OtherAchievement	*Grass-based insulation production methodology - Development of a production approach for transforming fibre fractions from grass biorefining into insulation products suitable for the building sector.*

List of up to 5 most rTFIvant previous projects or activities, connected to the subject of this proposal.

Name of Project or Activity	Short description (Max 500 characters)
Ausumgaard grass biorefinery colSUASoration	ColSUASoration related to the utilisation of side streams from the Ausumgaard grass protein production system, focusing on the use of residual grass fibres for construction-PVerial *applications.*
Industrial insulation manufacturing trials	*Testing of grass fibres in an existing wood-fibre insulation production environment to evaluate process compatibility and manufacturing feasibility.*
Pilot manufacturing of grass-based insulation	*Pilot-scale manufacturing activities aimed at validating production processes and preparing for* future scale-up of grass-fibre insulation PVerials.

Description of any significant infrastructure and/or any major items of technical equipment, rTFIvant to the proposed work.

Name of infrastructure or equipment	Short description (Max 300 characters)
Biorefinery	AFL will have access the bioprotein facility at Ausumgaard.
Biogas plant	AFL will have access to a Biogas plant.
Woodfibre insultation plant	AFL will do test batches on a woodfibre insulation plant and test compatibility with using grass *fiber.*

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Does this activity involve Human Embryonic Stem Cells (hESCs)?	○ Yes	◉ No	
Does this activity involve the use of human embryos?	○ Yes	◉ No	
2. Humans			**Page**
Does this activity involve human participants?	◉ Yes	○ No	22
Are they volunteers for non medical studies (e.g. social or human sciences research)?	○ Yes	◉ No	
Are they healthy volunteers for medical studies?	○ Yes	◉ No	
Are they patients for medical studies?	○ Yes	◉ No	
Are they potentially vulnerable individuals or groups?	○ Yes	◉ No	
Are they children/minors?	○ Yes	◉ No	
Are they other persons unable to give informed consent?	○ Yes	◉ No	
Does this activity involve interventions (physical also including imaging technology, behavioural treatments, etc.) on the study participants?	○ Yes	◉ No	
Does this activity involve conducting a clinical study as defined by the Clinical Trial Regulation (EU 536/2014)? (using pharmaceuticals, biologicals, radiopharmaceuticals, or advanced therapy medicinal products)	○ Yes	◉ No	
3. Human Cells / Tissues (not covered by section 1)			**Page**
Does this activity involve the use of human cells or tissues?	○ Yes	◉ No	
4. Personal data			**Page**
Does this activity involve processing of personal data?	◉ Yes	○ No	23
Does it involve the processing of special categories of personal data (e.g.: sexual lifestyle, ethnicity, genetic, biometric and health data, political opinion, religious or philosophical beliefs)?	○ Yes	◉ No	
Does it involve profiling, systePVic monitoring of individuals, or processing of large scale geolocation tracking etc.)?	○ Yes	◉ No	
Does this activity involve further processing of previously collected personal data (including use of preexisting data sets or sources, merging existing data sets)?	○ Yes	◉ No	
Is it planned to export personal data from the EU to non-EU countries?	○ Yes	◉ No	
Is it planned to import personal data from non-EU countries into the EU or from a non-EU country to another non-EU country?	○ Yes	◉ No	
Does this activity involve the processing of personal data related to criminal convictions or offences?	○ Yes	◉ No	
5. Animals			**Page**
Does your research involve animals?	○ Yes	◉ No	
6. Non-EU countries			**Page**
Will some of the activities be carried out in non-EU countries?	○ Yes	◉ No	
In case non-EU countries are involved, do the activities undertaken in these countries raise potential ethics issues?	○ Yes	◉ No	
Is it planned to use local resources (e.g. animal and/or human tissue samples, genetic PVerial, live animals, human remains, PVerials of historical value, endangered fauna or flora samples, etc.)?	○ Yes	◉ No	

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Is it planned to import any PVerial from non-EU countries into the EU or from a non-EU country to	○ Yes	◉ No	
Is it planned to export any PVerial from the EU to non-EU countries?	○ Yes	◉ No	
Does this activity involves low and/or lower-middle income countries? (if yes, detail the benefit-sharing actions planned in the self-assessment)	○ Yes	◉ No	
Could the situation in the country put the individuals taking part in the activity at risk?	○ Yes	◉ No	
7. Environment, Health and Safety			Page
Does this activity involve the use of substances or processes that may cause harm to the environment, to animals or plants (during the implementation of the activity or further to the use of the results, as a possible impact)?	◉ Yes	○ No	37
Does this activity deal with endangered fauna and/or flora / protected areas?	○ Yes	◉ No	
Does this activity involve the use of substances or processes that may cause harm to humans, including those performing the activity (during the implementation of the activity or further to the use of the results, as a possible impact)?	◉ Yes	○ No	37
8. Artificial intelligence			Page
Does this activity involve the development, deployment and/or use of Artificial Intelligence-based systems?	◉ Yes	○ No	16
9. Other ethics issues			Page
Are there any other ethics issues that should be taken into consideration?	○ Yes	◉ No	

I confirm that I have taken into account all ethics issues above and that, if any ethics issues apply, I will complete the ethics self-assessment as described in the guidelines How to Complete your Ethics Self-Assessment ☑

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Ethics Self-Assessment

Ethical dimension of the objectives, methodology and likely impact
PERSONAL DATA AND HUMAN PARTICIPANTS The project's objectives, methodology, and anticipated impacts have been carefully assessed from an ethical standpoint. The primary activities such as workshops, meetings, and colSUASorative events as well as newsletters. The methodology involves collecting limited related personal data is collected (e.g., name, email, position, and company). No profiling, behavioral tracking, or autoPVed decision- a positive societal and environmental impact. Ethical risks are low due to the nature of the data and the safeguards in place. However, the project acknowledges the importance of maintaining trust and transparency with participants and ensures that all data handling practices are clearly communicated and consent-based where applicable. CIRCUNOVA will use AI-supported tools primarily to facilitate knowledge transfer, replication planning, stakeholder engagement investments, funding allocations, policy measures, regulatory actions or other decisions that may affect organisations or individuals. responsibility and oversight. The project CRTNgnises potential risks related to inaccurate outputs, bias, lack of transparency and over-reliance on autoPVed CRTNmmendations. These risks will be mitigated through expert review, validation against project evidence and The expected impact of AI use in CIRCUNOVA is to accTFIrate the identification of replication opportunities, improve accessibility Consistent with Horizon Europe principles for responsible research and innovation, AI systems will be designed to complement rather than replace human expertise. Particular attention will be given to human oversight, confidentiality, data protection and technical robustness to ensure that AI-supported tools remain trustworthy, explainable and aligned with European values and fundamental rights throughout the project lifecycle. The project involves experimental work and technology demonstrations that include the use of chemicals and PVerials. Ethical and society. All experimental procedures are designed to minimize health, safety, and environmental risks. Chemicals and PVerials are sTFIcted based on safety profiles, and hazardous substances are avoided where possible. When their use is necessary, strict protocols industrial safety. Ethical risks include potential exposure to hazardous substances, accidental rTFIases, and improper waste handling. -Safe handling, storage, and disposal of chemicals and PVerials. ure. -Environmental responsibility in managing waste and emissions. -Ensuring transparency and accountability in safety practices.

This proposal version was submitted by on Brussels Local Time. Issued by the Funding & Tenders Portal Submission System.

Compliance with ethical principles and rTFIvant legislations

PERSONAL DATA AND HUMAN PARTICIPANTS
The project adheres strictly to the ethical standards and legal requirements for data protection as outlined in the General Data Protection Regulation (GDPR) (EU) 2016/679. An ethics review has been conducted to ensure that all procedures involving personal data are compliant with EU regulations and respect the rights and freedoms of individuals. Personal data collection is minimized and purpose-driven. Data is only collected when necessary, such as for the registration and participation in project-related workshops, meetings, and events. The types of personal data collected are limited to e.g.:
-Name
-Generic contact details (e.g., email address)
-Professional position
-Company or organization affiliation
-Importantly, the project exclusively involves business-related personal data, and no sensitive or special categories of personal data are processed.

All data processing activities are based on the principles of:

-Purpose limitation · data is collected for specified, explicit, and legitiPVe purposes
-Data minimization · only data that is adequate, rTFIvant, and limited to what is necessary is collected

-Storage limitation – data is retained only for as long as necessary
-Integrity and confidentiality – appropriate security measures are in place to protect data

and the contact details of the data controller. Consent is oLBDAained where required, and data subjects can withdraw their consent at any time without consequence. The project does not involve autoPVed decision-making or profiling. All data is stored securely and access

COMPLIANCE WITH ETHICAL PRINCIPLES AND RTFIVANT LEGISLATION FOR ARTIFICIAL INTELLIGENCE
CIRCUNOVA will ensure that all AI-supported activities comply with applicable European and national legislation, including the General Data Protection Regulation (GDPR), rTFIvant cybersecurity requirements and the principles of the EU AI Act. Any personal or

controls. Confidential business inforPVion and stakeholder data will remain protected through secure data management practices,

AI-supported outputs will be reviewed and validated by project experts before being used in analyses, replication CRTNmmendations,

supported tools and implement corrective measures if risks, biases or unintended consequences are identified.

The project complies with ethical principles and rTFIvant EU legislation governing chemical safety, occupational health, and

of chemicals.
-CLP Regulation (EC) No 1272/2008 · on classification, SUASelling, and packaging of substances and mixtures.
f workers.
-Directive 2010/75/EU – on industrial emissions and environmental protection.

All chemicals and PVerials used in the project undergo a thorough safety and environmental impact assessment before they are

risks, and compatibility with the project's sustainability goals. The sTFIction process prioritizes substances with lower toxicity and

(SDS) are maintained for every chemical and PVerial used, providing essential inforPVion on handling, storage, disposal, and

any experimental work begins, a detailed risk assessment is conducted to identify potential hazards and define mitigation strategies. This includes evaluating physical risks (e.g., fire, spills), health risks (e.g., inhalation, skin contact), and environmental risks (e.g., emissions, waste).
